SOCIETY

University of Sri Jayewardenepura
Student Branch Chapter

1.OVERVIEW

Congratulations to all shortlisted teams! You have successfully completed Round 1 (Ideathon Phase) and have been selected for the Final Round of Beauty of Cloud 2.0.

In this final phase, teams are expected to:

- **Refine and expand the cloud architecture proposal submitted in Round 1.**
- **Prepare a clear, concise, and professional presentation.**
- **Develop and demonstrate a functional Minimum Viable Product (MVP) during your assigned presentation slot.**

Important Requirement Update:

A working MVP is mandatory for the final evaluation. While a fully production-ready system is not expected, you must implement a meaningful portion of the cloud architecture and demonstrate it live (or via a high-quality recorded demonstration if technical constraints arise).

2. KEY DELIVERABLES

Every shortlisted team must prepare and submit/present the following deliverables:

- Pitch Presentation (Pitch Deck): A clear, visual slide deck covering problem understanding, solution architecture, security, scalability, cost management, and live demo breakdown.
- MVP/Working Demo: A functional demonstration showcasing the core capabilities of your cloud solution, presented during your allocated slot

3. PRESENTATION GUIDELINES

SESSION STRUCTURE

SESSION COMPONENT	ALLOCATED DURATION
PRESENTATION DURATION	15 MINUTES
Q/A & VIVA SESSION	5 MINUTES
TOTAL TIME SLOT	20 MINUTES

Recommended Slide Deck Structure

1. Title Slide: Team introduction & locked scenario
2. Problem Analysis: Core pain points & contextual scope
3. Proposed Solution Overview: High-level value proposition
4. Cloud Solution Architecture: Detailed diagram with cloud service justifications
5. Security & Compliance Framework: Data protection, IAM, and privacy controls
6. Scalability, Reliability & Cost Strategy: Resource elasticity & budget optimization
7. Implementation Roadmap: Development phases and future milestones
8. Live MVP Demonstration: Core user flow walk through
9. Engineering Challenges & Learnings: Key constraints and future enhancements
10. Conclusion & Q&A

3. PRESENTATION GUIDELINES

Presentation Tips

- Keep slides clean, highly visual, and legible. Architectural diagrams are strongly prioritized by evaluators.
- Articulate design rationale - focus on why specific cloud services were chosen rather than simply listing them.
- Ensure all team members contribute effectively during the presentation and viva session.

4. MVP & DEMO REQUIREMENTS

- Scope: The MVP does not need to cover every edge case, but it must demonstrate the core value proposition and key user flows.
- Live Execution: Demonstrations should ideally be conducted live during the presentation slot.
- Fallback Option: If live execution is limited by external APIs or credit costs, a crisp, well-narrated recorded demo combined with architectural explanation is acceptable.
- Clarity on Scope: Teams must explicitly communicate:
 - **Fully functional capabilities built in the MVP.**
 - **Partially integrated or mocked services.**
 - **Features deferred to future releases.**

Note: Teams that present slides without any functional MVP demonstration will receive significant markdowns.

5. FINAL ROUND JUDGING CRITERIA

Criteria	Weightage	What Evaluators Will Look For
Solution Architecture & Scalability	25%	Architectural clarity, proper cloud service selection, logical justifications, and resilience under high load.
Problem Solving & Innovation	20%	Direct alignment with real-world problems, original technical design, and practical feasibility.
Security & Compliance	15%	Specific security mechanisms, data encryption, access governance, and domain regulatory standards.
Availability, Monitoring & Reliability	15%	High availability design, fault tolerance, proactive monitoring, and disaster recovery planning.
Cost Management	10%	Cost awareness, utilization of serverless/auto-scaling tiers, and budget efficiency.
Presentation & Documentation	10%	Visual clarity of slides, articulation, quality of supporting documents and system diagrams.
MVP Demo Quality	5%	Functional completeness of core features, live execution quality, and transparent technical reporting.
Total	100%	Comprehensive evaluation across all technical and presentation dimensions.

6. RULES & COMPLIANCE

- Teams must strictly adhere to the scenario locked in during Round 1.
- Cloud platforms permitted: AWS, Google Cloud Platform (GCP), Microsoft Azure, or a well-justified multi-cloud approach.
- Teams are encouraged to utilize free tiers, sandbox environments, or student cloud credits. Excessive spending is not required or evaluated.
- Team composition must remain strictly identical to official registration.
- All registered members should be present for the final presentation and viva session.

7. CONTACT & SUPPORT

For technical queries, submission details, or schedule coordination, please contact the organizing committee:
